Navarre Minerals (ASX: NML) is a Victoria-based explorer with four main exploration projects in central and western Victoria with potential for large gold and copper-gold-zinc deposits.

## Navarre Minerals finds more gold near Bendigo

Wednesday, October 17, 2012 by [Proactive Investors](#)

**Navarre Minerals** (ASX: NML) has had more drilling success near Bendigo with results delivering gold with grades up to 59.2g/t gold.

The results were from the Macnaughtan Line in air-core drill hole ACT151 at the Tandarra prospect, part of the Bendigo North group of gold projects, located 40km north of Bendigo, Victoria, Australia.

Results recorded were 4.5 metres at 23.1g/t gold from 69.0m down-hole, including an interval of 1.5 metres at 59.2g/t gold.

This is Navarre's highest gold result for the Macnaughtan line, and is surpassed only by ACT015 which returned 10 metres at 34.4g/t gold from a depth of 37 metres on the adjacent Tomorrow line.

This initial result forms part of the first batch of assays received for the first 16 drill holes of a 13,000 metres air-core drilling program which commenced at Tandarra on 1 October 2012.

The results are sure to be encouraging and further demonstrate some similarities between gold-bearing reefs under shallow cover at Tandarra and the Bendigo Goldfield, 40 kilometres to the south.
