About Navarre Minerals Limited:

Navarre Minerals Limited (ASX: NML) is an Australian-based resources company that is creating value from a portfolio of early to advanced stage gold projects in Victoria, Australia.

Navarre is searching for gold deposits in the extension of a corridor of rocks that host the Stawell (~five million ounce) and Ararat (~one million ounce) goldfields. The discovery of outcropping gold at the Irvine Gold Project and high-grade gold in shallow drilling at Langi Logan are a prime focus for the Company. These projects are located 15km and 40km respectively south of the Stawell Gold Mine, which Arete Capital Partners has recently reopened.

*The high-grade **Tandarra Gold Project** is located in close proximity to Kirkland Lake Gold’s world class Fosterville Gold Mine, and 40kms north of the 22 million-ounce Bendigo Goldfield. Exploration at Tandarra is targeting the next generation of gold deposits under shallow cover in the region. Under a joint-venture agreement with Catalyst Metals Limited (NML 49%) the parties are advancing the project towards mineral resource status.*

*At the **Glenlyle Project** the Company has identified an epithermal gold-silver system above a potential porphyry copper-gold target that occurs in the same volcanic package that hosts the nearby Thursdays Gossan deposit.*

*The Company is searching for a potential Fosterville-style high-grade gold mineralisation system at the **St Arnaud Gold Project**. Recent reconnaissance drilling has identified potential ore grade gold mineralisation under shallow cover which the Company believes may be an extension of the historic 0.4Moz St Arnaud Goldfield.*

*At the advanced **Irvine Project**, planning for deeper diamond drilling is underway, targeting depth extensions to the shallow gold mineralisation outlined at Resolution and Adventure Lodes. This drilling is expected to commence in Q4 2019.*
